SUGARBITTS · AI READY BAKERY KICKSTART

Day 1: Organise & Find Your Starting Point

Session 1 of 3

Copy each box below and paste it into ChatGPT or Claude when we get to that step.

Before we start: log in to **ChatGPT** (chatgpt.com) or **Claude** (claude.ai) on your laptop or phone. Keep this handout open.

1 Set up your Bakery Project

A Project is a folder where AI always remembers your bakery. Create a new Project called **"My Bakery Business"**, then paste this into its **instructions** and fill in the brackets.

```
About my bakery:
- Business name: [ ]
- Location and currency: [e.g. Lagos, ₦ / London, £]
- What I sell: [e.g. celebration cakes, cupcakes, small chops]
- My customers: [e.g. birthdays, weddings, corporate]
- How I get orders: [WhatsApp, Instagram, referrals]
- I work: [alone / with help], [full-time / part-time]
- My biggest challenge right now: [ ]
Always give simple, practical answers for a small home bakery.
Ask me questions if you need more information.
```

2 Take your AI Readiness Check

Start a new chat **inside your Project**. Copy this, put your score (1 = not at all, 5 = fully) in each bracket, then send.

```
Act as an AI business coach for my bakery. I have scored myself
from 1 (not at all) to 5 (fully) on these 5 statements:
1. I know exactly what each cake costs me to make: [ ]
2. I keep records of my sales and expenses: [ ]
3. I post about my business consistently: [ ]
4. I have a weekly routine for orders, baking and follow-ups: [ ]
5. I already use AI tools in my business: [ ]
Add up my score out of 25, tell me my level
(5–11 Getting Started, 12–18 Building, 19–25 Ready to Grow),
and tell me the ONE area I should fix first and why.
```

3 Sort your weekly tasks

Think of the **5 most important tasks** you do every week to run your bakery: the ones that take the most time or bring in money (e.g. pricing & quoting orders, replying to enquiries, buying ingredients, posting on social media, recording sales). Fill them in and send:

```
Here are the 5 most important tasks I do every week in my bakery:
1. [ ]  2. [ ]  3. [ ]  4. [ ]  5. [ ]
Sort each one into: ELIMINATE (stop doing), AUTOMATE (AI can help),
DELEGATE (someone else can do it), or KEEP (only I should do it).
Show it as a table with a one-line reason for each,
then tell me which AUTOMATE task would save me the most time or money.
```

📝 AI not working? Use paper

Score the 5 questions in Step 2 yourself (1–5 each) and add them up.
5–11 Getting Started · **12–18** Building · **19–25** Ready to Grow
Type your total in the Zoom chat.

🎂 Homework before Day 2

Pricing Recipe Card for one signature cake:

- Each ingredient: pack size, pack price, amount used
- Packaging & decoration costs
- Hours spent · monthly overheads · your hourly rate
- Bring it with you to Day 2. We will put it to work!

🔒 Never paste customer phone numbers, addresses or payment details into AI. Always double-check AI's numbers before quoting a price. Use your real supplier prices, not competitors' prices.
